🔴 **Major Service Outage**

We rented access to someone else's developer.

Stop Renting Your Developer

Agentics NYC • May 6, 2026

Vargas — Vellum

What if you could stop renting?

LLMs give you more developers.
Build the solutions you actually need.

Renting

GitHub

Linear

Notion

Figma

Google

HubSpot

Webflow

Shortcut

Gamma

Owning

ApolloBot

Vex

Pax

Ava

Becky

Credence

It speaks your language.

Your context. Your codebase. Your priorities.
Not a generic SaaS dashboard.

2

It gets better every day.

You can immediately unblock issues that come up.
SaaS ships on their roadmap. You ship on yours.

You own the whole stack.

No vendor lock-in. No API limits. No feature gates.
When something breaks at 3:47 PM, you fix it.

It isn't free.

Time

Months of upfront work

Maintenance

You own every bug

Unproven

No guarantees it works.

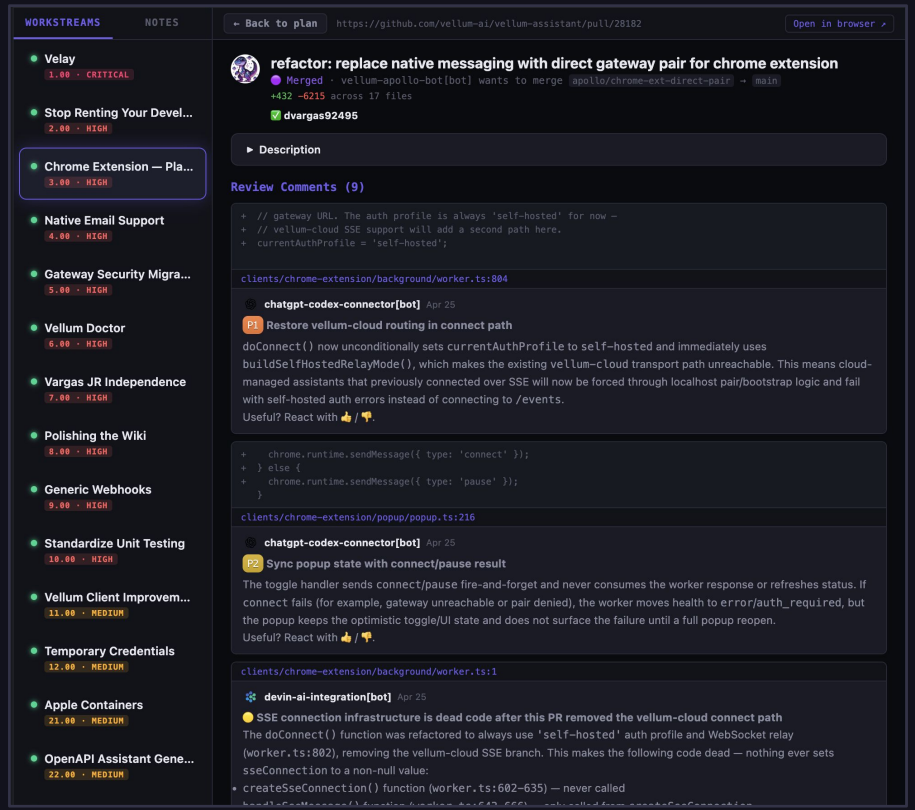

How to start.

- Give each employee a token budget
- Create spaces for people to share what they’re building
- Invest in devbox’s for each person’s custom app development

Build when...

- Start with what hurts
- You use it every single day
- You've hit the vendor's ceiling
- You need it to know YOUR context

Replacing the GitHub PR interface.

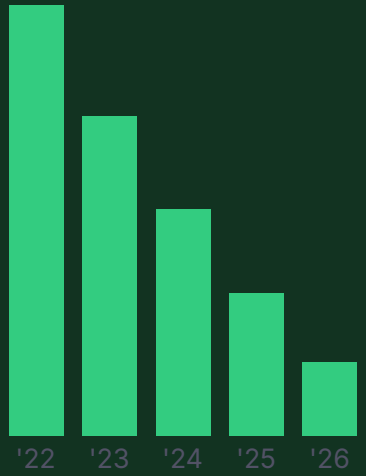

Owning is getting cheaper

Model cost: −10× every ~18 months

Open source closing the gap fast

Infrastructure becoming commodity

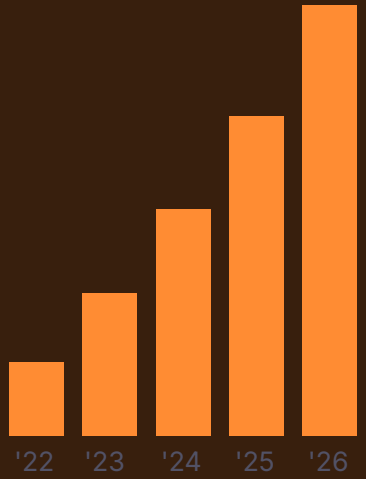

Renting isn't

Engineering salaries still climbing

SaaS seat pricing up every renewal

Investor expectations don't reset
